### **MarCom Enters DOE Mentor Protégé Program with Fluor Idaho**

MarCom, LLC has been approved to partner with Fluor Idaho, LLC in the U.S. Department of Energy (DOE) Mentor Protégé Program. The Mentor Protege Program is a DOE initiative established to provide an opportunity for eligible small businesses to receive developmental assistance from experienced businesses performing as DOE contractors.

MarCom has a history of performing DOE contract work, suppling management, administrative, software development, engineering, nuclear operations, staff augmentation, and health-and-safety services to DOE sites around the nation. This opportunity will foster a long-term relationship between the Mentor and the Protégé and provide increased opportunities and resources that contribute to MarCom's growth.

As the Protégé, MarCom's goal is to expand and improve our capabilities to perform contracts and subcontracts for DOE and its prime contractors. Our commitment is to support Fluor in their mission goals specifically in aiding in the DOE Idaho Cleanup Project. We look forward to Fluor Idaho's assistance in the development our knowledge and expertise.

Marcella Medor, MarCom's president, is enthusiastic about the potential this agreement creates. "I would like to thank Fluor Idaho for this opportunity to further strengthen our relationship. We will bring our unique skill sets to Fluor Idaho, while gaining the knowledge and business expertise to facilitate continued growth and long-term company success."

Founded in 2003, MarCom is a Small Business Administration-certified, Native American-owned, and woman-owned business with offices in Idaho Falls, Butte, Montana, and Fort Collins, Colorado. MarCom provides information technology services, waste management characterization and support, technical and project management staff augmentation, environmental services, engineering services, and nuclear operations.
